

# ORIGEN BY ENGRAW

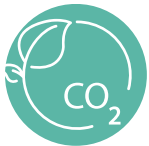

WOOL PROCESSED WITH RENEWABLE ENERGY

We process 4.500 tonnes of fine mulesing free wool following measurable sustainable practices, fully traceable to a dedicated farmer. Our wool tops are manufactured in Uruguay, South America and created into premium yarns in Europe in a respectful work environment with prompt delivery.

## Regenerative

Our growers practice a holistic approach towards land management learned through the Land To Market Program, the world's first verified regenerative sourcing solution.

## Carbon counting

It was 2019 when we started measuring our carbon footprint and taking actions to reduce our emissions and compensate accordingly.

## Traceability

Learn our growers stories from our fully traceable route that take you back to the land where the sheep were raised.

## Renewable

We are proud to be pioneers in the use of renewable energy. We process nearly our entire production using wind power from two windmills located in our facility.
