Over fifty years of history

Macpi, founded in 1961, is a worldwide leader in manufacturing highly technological machines for garment industry following the tradition of Made in Italy with a constant research in terms of quality, style and innovation that cannot make compromises with a downward policy.

The accrued experience of almost 60 years brought Macpi to produce greatly sophisticated automatic units for thermo-fusing, loading and unloading system, complete line for the intermediate and final finishing of jackets, coats, jeans, knitwear, trousers, shirts, automatic machines for stitch-free applications and special units for industrial laundries.

The headquarter located in Palazzolo s/O, Brescia province, is a state of the art facility where R&D, production and offices are combined, the production site in Vigevano is dedicate to tables, dummies and boilers for garment and laundry industries, Shanghai company is the main reference for the Asian market.

The policy to explore new markets and guarantee an excellent after-sales service with direct offices drove Macpi to be a leader present and recognized all over the world.

The collaboration during the years with the most important brands in the market took the italian company to the highest standards also in terms of sustainability, safety, customization and flexibility.

1965

First clear head pressing machine

Was presented the first model of pressing machine with fold-away upper surface, a revolution that setted a standard on comfort in the workstation.

1972

The first carousel
Was launched officially the carousel system, a unique machine that makes the lines efficient and fast, a big technological gap between Macpi and competitors that set a new standard.

1969

Electronic board
Macpi introduce the electronic board to control the functionalities of the automatic units.
