

## 2025 Sustainability Goals

### Responsibly Sourced Fibers

Our products will be produced using at least 50% recycled polyester content.

### Reduced Water Consumption

Our manufacturing operations will reduce their water intensity by 25% per unit of production.

### Reduced Greenhouse Gases

Our specific greenhouse gas target is to achieve a 2.5% per year reduction trajectory.

As part of Elevate Textiles, Burlington is committed to responsibly sourcing fibers, reducing its water consumption and greenhouse gas emissions by 2025.

Sustainability is the standard.

We have a responsibility to be mindful of the impact we have on the environment. What goes around comes around and what was once new doesn't have to become waste. Create new meaning and purpose with Restora™.

A renewable fabric collection for the eco-conscious consumer, Restora™ features our sustainable product offerings in all new fabric developments through innovative fibers and chemical technologies.

## Partners in Sustainability

Recycled Plastic Waste

Recycled Fibers

Reducing Microplastic Pollution

Cleaner Oceans

## Responsibly Certified

Burlington has been a proud member of bluesign® since 2013. We also offer Oeko-Tex certified fabrics.

The bluesign® system eliminates harmful substances right from the beginning of the manufacturing process and sets and controls standards for an environmentally friendly and safe production.

OEKO-TEX® is a worldwide, independent testing and certification system for raw, semi-finished, and finished textile products at all processing levels, as well as accessory materials used.

## Responsible Chemistry

We are committed to reducing and eliminating risk in chemical management.

The ZDHC (Zero Discharge of Hazardous Chemicals) Roadmap to Zero Program takes a holistic approach to tackling the issue of hazardous chemicals in the global textile, leather and footwear value chain.

The goal is to eliminate the use of priority hazardous chemicals by focusing on four areas: RSL & Conformance Guidance, Wastewater Quality, Audit Protocol and Research.

The Higg Index is a self-assessment tool to better identify and improve environmental and social problems. Wherever you are in the supply chain, the Higg Index can help you better understand the impact of your products and manufacturing processes while also highlighting opportunities for innovation and improvement.

The Sustainable Apparel Coalition's (SAC) vision is of an apparel, footwear, and textile industry that produces no unnecessary environmental harm and has a positive impact on the people and communities associated with its activities. SAC develops the Higg modules, which are all designed to standardize and make sustainability data readily available.

## Memberships

The CEO Water Mandate mobilizes a critical mass of business leaders to address global water challenges through corporate water stewardship, in partnership with the United Nations, governments, civil society organizations, and other stakeholders.

An organization aimed at mobilizing a global movement of sustainable companies and stakeholders to align their strategies and operations to meet societal goals.

## Making an Impact

Elevate Textiles 2025 Sustainability goals align with the UN Sustainable Development Goals shown here.
