

T8 TECH

Patent product and own trademark from Flyingtextile

T8 has special fiber structure liked springs. When the fabric interweaves by billions of tiny springs, it owns below features.

- **High stretch** without elastane
- **Cottony touch** comes from its textured fiber shape.
- **Better color performance** less migration, higher saturability and more convenient to print on polyester than polyamide.
- **Quick dry** on single layer fabric because of more micro space in the fabric to allow the moisture spread

T8 TECH[®]

Ultra-stretch polyester
超弹性涤纶

Lasting and high stretch

Firming and crisp

High color saturation

Soft touch and matte touch

When Denim meets

T8 TECH

**The cowboy appearance,
higher stretch polyester
without any spandex.**

**Extra cottony touch
accompany with your
cool time.**

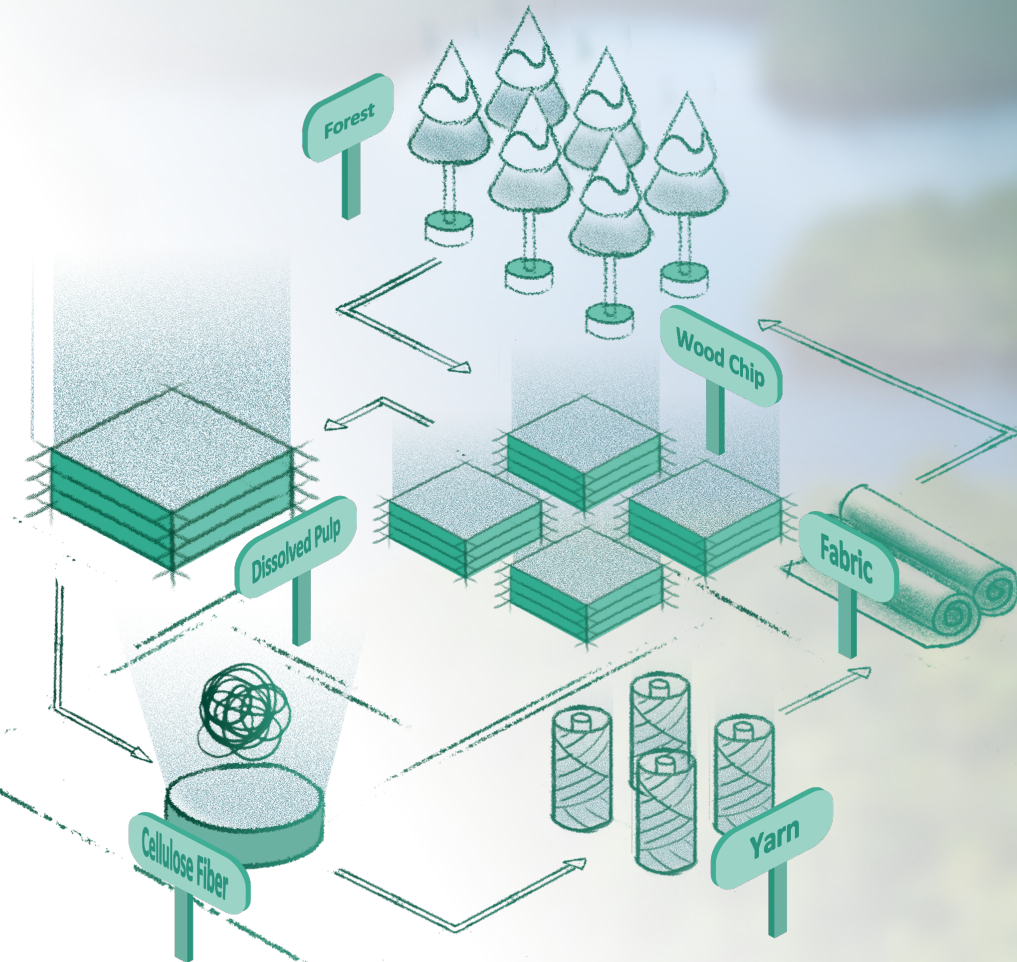

COTTONY

From Mountain to Street
Extra cottony touch
accompany with your cozy
time.

T8 TECH x EcoCosy® 优可丝® = TOUGHNESS x SOFTNESS

A miracle combination with

Ecocosy®

comes from sustainable plantation
offers natural and cosy touch

T8 Tech®

offers backbone and stretch
helps it wrinkle free and pilling resistace

Eco

Stretch

Easy care

Functions

With membrane
For windproof,
waterproof and
water repellent

Single layer
is skin friendly with
winkle free and quick
dry functions from yarn

AW Fresh

The odor control solutions

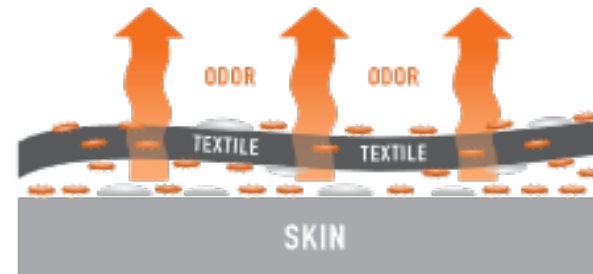

Polygiene®
STAYS FRESH

This odor control is based on a silver salt solution and inhibits the growth of odor-causing bacteria and stops the odor at the source permanently.

Odor Crunch is an odor control solution based on modified silica particles. Once the odor molecules have stuck to the modified silica particles in Odor Crunch, they will be crushed and cracked to smaller odorless molecules and the odor is permanently eliminated.

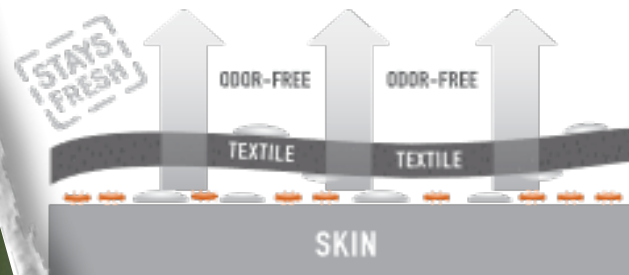

WITHOUT POLYGIENE

ODOR-CAUSING BACTERIA SETTLES AND MULTIPLY IN FABRIC/MATERIAL

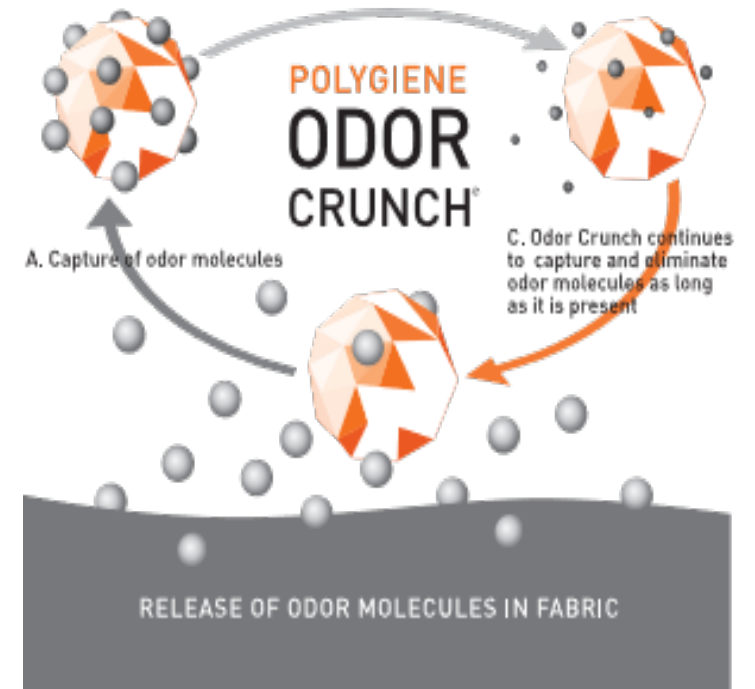

WITH POLYGIENE

INHIBITS THE GROWTH OF ODOR-CAUSING BACTERIA IN FABRIC/MATERIAL

B. Elimination of odor molecules

POLYGIENE
STAYS
FRESH™

ViralOff
POLYGIENE TECHNOLOGY

Polygiene ViralOff is a brand for a treatment of textiles and other products that reduces tested viruses by 99% in two hours

Bacteria are ubiquitous, so the antimicrobial finishes commonly apply on clothing to prevent bacteria from multiplying and accumulating.

Antiviral finishing, unlike the usual antibacterial, must be more efficient to let the external virus inactivate, to protect us from infection.

For more information: www.polygiene.com.

AW Areo

**Keep the warmth in
Let your body breath**

There are billions of micropores to allow air move through freely. It is the technology to be real air breathing and still downproof to keep warmth.

Air permeability —
Light weight —
Downproof —

G1 Tech

is the fiber which contains Graphene chemically polymerized with polyamide, instead of simply physically wrapped into the polymer. That is why it permanently has below features:

Anti-Static

Its high electric conduction allows electrons move freely to avoid gathering which leads static happen.

Anti-Bacterial

graphene makes bacterial can't be alive.

Far Infrared

As carbon material, it can release far infrared to make you feel warmer.

FLOWSHINE

FLOWSHINE

Clean x Clear

This is Nylon

BIODEGRADABLE

Bio-degradable Polyamide Amni Soul Eco®

which – under landfill conditions – facilitates access and digestion of waste material by bacteria, thus accelerating the biodegradation process. It degrades in around 5 year after disposed in landfills. (ASTM D 5511)

Feels so right

TRiple ACETATE 3

ECO X TECHNICAL X FASHION

TRACETATE is plant-based material made only by Mitsubishi Chemical. As regenerated cellulose filament, Triacetate is the most closed to natural silk than any other man-made fiber. That is why it has **elegant gloss**, but still easy care.
