MONO MATERIAL POLYESTER

## DESIGNED TO BE RECYCLED

Tape, Teeth, Elements, Slider and Puller are made of Polyester. Even the water repellent version is laminated with a Polyester film.

Combining it with polyester fabrics it will be possible to create mono-material products, easy to be recycled for a real circular economy.

Available also in the 80% recycled version, made of REPREVE® Polyester. Produced by UNIFI. REPREVE® is the world's leading branded recycled polymer. REPREVE® Polyester yarns comes from post-consumer recycled bottles. All these polymers contain FiberPrint®, a proprietary tracer technology that permits to analyze and validate directly on the finished products the real content and composition of REPREVE® materials. Thanks to the U-TRUST® certification process, it is guaranteed the highest level of transparency.

REPREVE®, FiberPrint® and UTrust® are registered trademark of Unifi, Inc in the US and other regions.
